

## Site Investigation, Bath, UK

Eneotech Environmental Ltd were employed by a leading defence contractor after the company had been taken over by a leading multinational defence equipment supplier. The new owners were aware of the historical land use and were interested in identifying any liabilities which they may have inherited. Historically the site had been on the boundary of the former town gasworks and the area of particular interest was an area of drum storage

Eneotech mobilised subcontractor drillers to extend 8No. air flushed rotary boreholes to 7m bgl. All boreholes were installed with dual groundwater and ground gas monitoring standpipes and finished at ground level with vehicle rated cover to allow further ongoing monitoring of groundwater conditions

Soil and groundwater samples were collected throughout the investigation and were dispatched to a UKAS accredited laboratory for analysis. Contamination was found to be localised to the near surface deposits and comprised of Polycyclic Aromatic Hydrocarbon (PAHs) and Total Petroleum Hydrocarbons (TPHs).

Under the instruction of the client Eneotech Environmental Ltd then took intrusive investigation results forward into a remediation options appraisal to consider cost benefit for a variety of techniques of which Eneotech have considerable experience, including offsite disposal as hazardous wastes and onsite bioremediation.

Eneotech Environmental Ltd. provides a wide range of environmental services to enable the redevelopment of contaminated land. We offer a full range of technologies and services including hazardous waste management, thermal desorption, bioremediation (windrow turning and ex situ static methods), soil vapour extraction, air spraging, soil washing and stabilisation and solidification.

Eneotech Environmental Ltd is backed by decades of experience and interdisciplinary skills amassed by the Eneotech group of companies.

Our company Eneotech Environmental Ltd ranks as one of the most highly skilled and dependable services providers specialising in site rehabilitation, waste disposal and service platform preparation.
